How to Use ToolLodge[®]

- IMPORTANT**
- Tool indentations are permanent. Finalize the layout prior to lodging tools.
 - Empty the organizer of tools prior to lifting or moving it.

1. FIT CHECK Install the ToolLodge[®] organizer in your empty tool drawer to check the fit. You may have to remove or extend the drawer. ToolLodge[®] should fit loosely.

2. LAYOUT Place the ToolLodge[®] on a sturdy, smooth work surface. Gently lay out your tools on the ToolLodge[®] the way you want them in the drawer, leaving a 1-inch margin around the edges. Avoid dropping tools on the organizer as this can dent or mar the core.

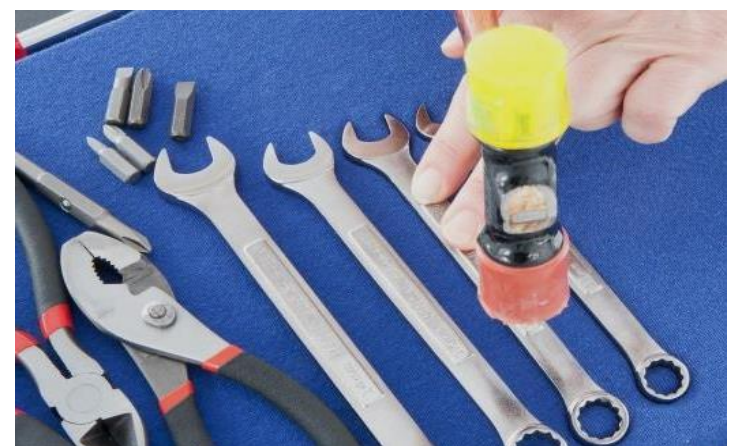

3. LODGE Once you have finalized the layout, press each tool individually into its place by applying firm finger/thumb pressure. This makes a permanent indentation for storing your tool.

For larger hand tools, it may be easier to press one end of the tool at a time, slowly rocking it. Make an indentation deep enough to hold the tool.

You will be putting a lot of pressure on your tools. Do not press or tap any tools which are not sturdy; they could break.

Once the impression of the tool has been started, if it's a very sturdy tool like a metal wrench, you can tap the tool further with a small non-marking hammer, being careful not to hit the ToolLodge[®].

4. GRIP TOOL Use the grip tool to create thumb-sized indentations for easier access to lodged tools.
